Words and Mathematical Symbols

Connect common mathematical language with symbols, then check the context.

Mathematical words can suggest a relationship, but the full context determines the operation.

+ plus, added to, total

$$3 + 2 = 5$$

Words alone do not determine an operation.

- minus, difference, remaining

$$7 - 4 = 3$$

× times, groups of

$$3 \times 4 = 12$$

÷ divided by, shared equally

$$12 \div 3 = 4$$

= equals, has the same value

$$2 + 3 = 5$$

() group this part first

$$(2 + 3) \times 4 = 20$$
